

MWH-RSXONE - Firmware Update Guide Switch 2 IMPORTANT

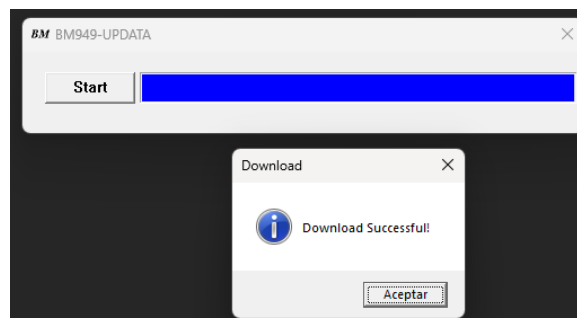

This firmware update should only be performed if the steering wheel has stopped working or has compatibility problems when connecting it to the Switch 2 console. Do not perform this process if the device is working correctly. Before performing the update, make sure that the wheel is connecting correctly following the steps indicated in the manual for connecting to the Switch console.

Update Procedure

1. **PC Connection:** Connect the steering wheel USB cable to a USB port on the back of your computer.
2. **Download:** [Click here to download the firmware update](#)
3. **Installation:** Run the update program "MWHRSXONE firmware update NS2.exe" and click on the "Start" button.
4. **Loading Process:** Wait for the progress bar to finish.
 - **WARNING:** DO NOT disconnect the steering wheel or press any button on it until the update is completely finished.

- Interrupting the process may permanently damage the device.
5. **Completion:** Once the program indicates that the process has been successful, click "OK" and close the update application.

Step 6: Connection to Switch 2 Follow the detailed steps to connect the wheel to Switch 2:

1. **Pro Controller Settings:** It is mandatory to enable the "Pro Controller Wired Communication" option in the console settings.
2. **Power Off:** Make sure the Switch console is in OFF mode before making physical connections.
3. **Pedal Connection:** Connect the pedal unit cable to the corresponding port on the back of the wheel base.
4. **Power On:** Turn on the console (ON) by pressing the power button.
5. **USB Link:** Connect the main USB cable of the steering wheel to the available USB port on the Switch Dock.
6. **Synchronization:** Press the Home button in the center of the wheel for the system to assign the controller.
